Item: 5362JC

MSRP Price: \$724.99

36" W x 36.5" D x 18.5" H

Ship Weight: 41 lbs

Warranty: 1 Year

Made in United States

JonTi-Craft® Wood LEGO® Short Square Table With Dual Storage - 5362JC

Two storage bags are better than one. The Wood LEGO® Short Square Dual Storage Table takes everything educators love about a great LEGO® table and doubles the storage capacity, with two separate mesh bags built into the surface to keep bricks organized, accessible, and ready for play.

Four color LEGO® base plates cover the square Baltic birch wood frame, giving kids a bright, inviting surface to build on at a comfortable low height. The dual storage design works especially well when kids are sorting bricks by color or type, or when two groups of builders want their own dedicated supply without sharing a single bag.

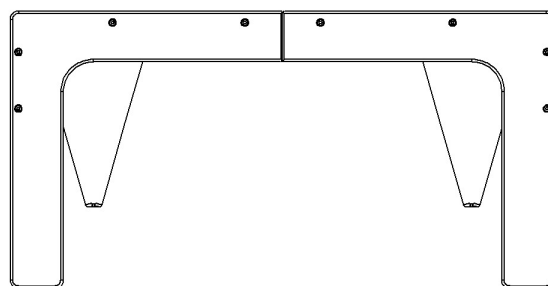

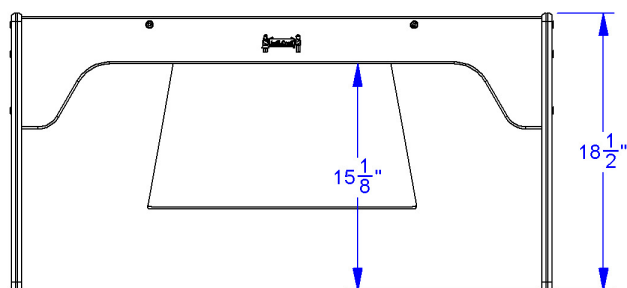

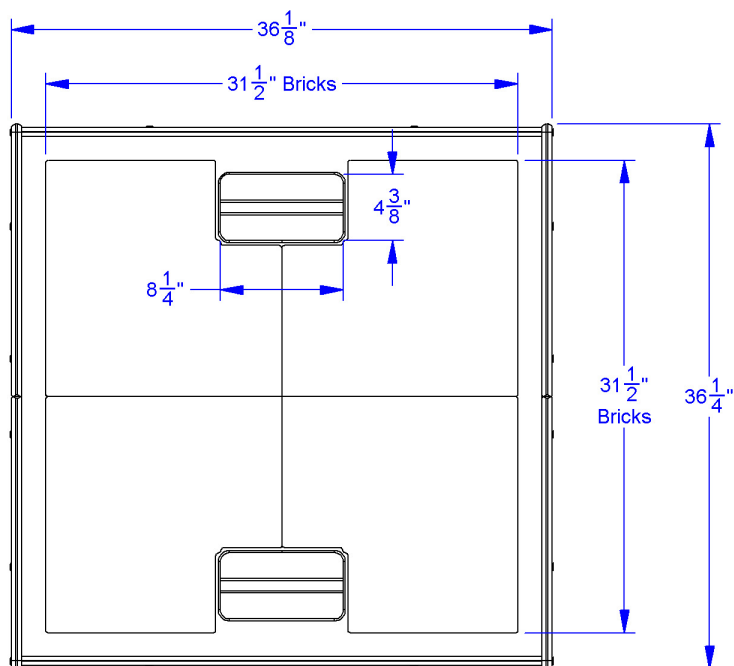

Each mesh bag sits beneath its own opening in the tabletop, keeping LEGO® bricks within easy reach during play. When the session is over, both Velcro closures draw shut quickly and each bag detaches independently from the table for washing. Twice the storage, with none of the extra hassle at cleanup time.

The clear-finished Baltic birch wood frame is built to hold up in schools, daycares, and childcare centers where activity tables see hard daily use. The low height makes it a natural fit for younger kids, while the generous square surface gives a group of builders plenty of room to spread out and create together.

For classrooms and daycare activity areas that want more from their LEGO® table, the dual storage design makes this one a step above the rest.

JonTi-Craft® Wood LEGO® Tall Square Table With Dual Storage - 5365JC

For older kids who need more room at their LEGO® table, the Wood LEGO® Tall Square Dual Storage Table delivers on every front. The taller frame brings the building surface to a comfortable height for preschool and school-aged kids, while the dual mesh storage bags give classrooms and daycares twice the brick storage in a single activity table footprint.

Four color LEGO® base plates sit in a clear-finished Baltic birch wood frame across a generous square surface, giving kids an attractive and well-organized space to build, create, and play. The two separate storage bags underneath the tabletop keep LEGO® bricks sorted and accessible throughout the session, whether kids are working from a shared supply or each pulling from their own bag.

Cleanup is fast and straightforward. Both Velcro closures seal the bags in seconds, and each bag lifts off the table independently for washing when needed. For teachers managing busy school days and active daycare schedules, that kind of efficiency matters.

Baltic birch wood construction gives this LEGO® storage table the strength and durability to handle consistent daily use in schools and childcare centers. The natural finish keeps the look warm and classroom-appropriate while standing up to the wear that comes with active kids and heavy play.

A taller build, double storage, and solid wood quality make this one of the most capable LEGO® tables available for older kids in any early childhood setting.
