Made in United States

JonTi-Craft® Wooden Kids DUPLO® Square Short Storage Table - 5360JC

Toddlers learn through play, and the right table makes all the difference. The Wooden Kids DUPLO® Square Short Storage Table brings together a low, accessible height and a generous square surface to create the ideal DUPLO® play space for young kids in classrooms, daycares, and early childhood centers.

Four color DUPLO® base plates are set into a clear-finished Baltic birch wood frame, giving little ones a sturdy, inviting surface to build on. The lower height is a natural match for toddlers and preschool-aged kids, putting the DUPLO® base plates right at a comfortable level so they can dig in and build with confidence from the moment they sit down.

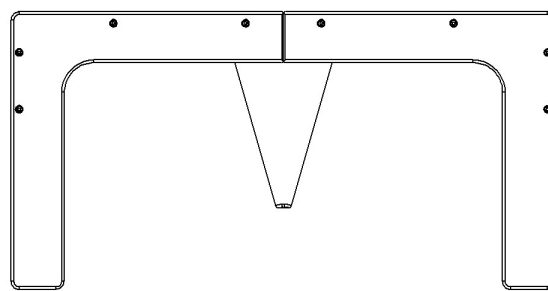

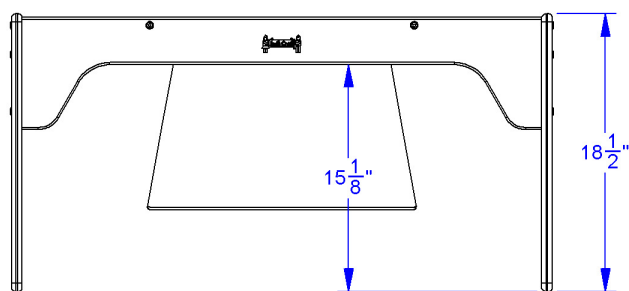

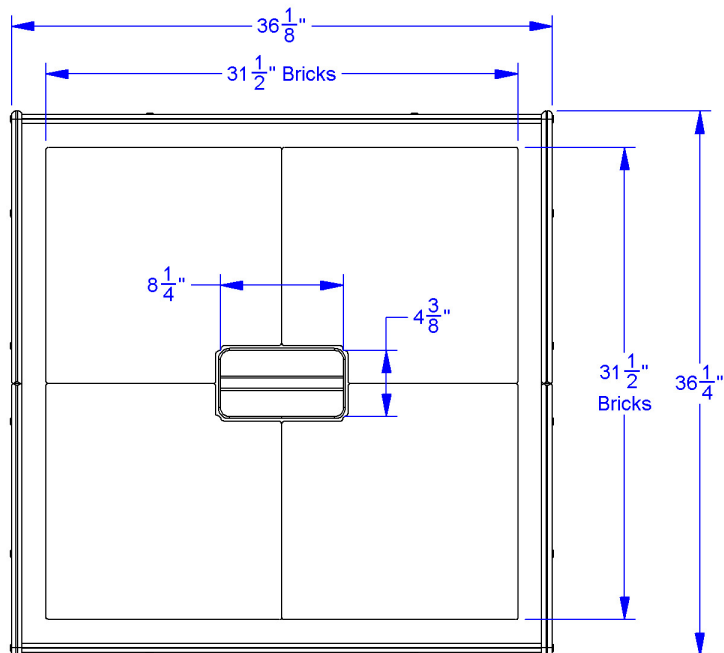

The built-in mesh storage bag keeps the play moving. Extra DUPLO® bricks stay organized and within easy reach throughout the session, so kids spend their time building rather than searching. When the activity wraps up, the Velcro closure secures the bag, and it lifts right off the table for washing. A quick, simple cleanup that fits the rhythm of any busy daycare or school day.

Crafted from durable Baltic birch wood, this DUPLO® storage table is built to handle the enthusiasm of young kids in active learning environments. The natural wood finish adds warmth to any activity table area while holding up to daily use in schools and childcare centers without showing wear.

Purposeful in its design and practical in every detail, it is a DUPLO® table that young learners will return to again and again.

JonTi-Craft® Wooden Kids DUPLO® Square Tall Storage Table - 5367JC

The Wooden Kids DUPLO® Square Tall Storage Table offers a taller frame that works well for preschool-aged children who have grown past the lowest activity table heights but still love the hands-on creativity that DUPLO® play brings to the school day.

Four color DUPLO® base plates sit in a clear-finished Baltic birch wood frame across a generous square surface, giving kids plenty of room to build, experiment, and create. The taller height keeps things comfortable for growing kids, letting them engage fully with the DUPLO® table without hunching over or straining to reach.

Storage is thoughtfully built in. The mesh bag below the base plates keeps DUPLO® bricks organized during play and contains them easily when the session ends. The Velcro closure draws the bag shut in seconds and the whole bag detaches from the table for washing, making cleanup simple for teachers and caregivers in any school or daycare setting.

Baltic birch wood construction gives this DUPLO® storage table the durability that busy classrooms and childcare centers require. It holds up to active daily use while maintaining the natural warmth that makes wood furniture a lasting choice in early learning environments.

Whether it serves as the anchor of a dedicated DUPLO® table zone or fits into a larger activity table arrangement, the taller height and smart storage design make it a practical, well-considered addition to any early childhood space.
